

KaiVac Tackles New-Construction Cleanup

“The first time we saw our new athletic building,” says Melinda Jackson at Mount Vernon Middle School, “it was covered with dust and dirt. Everything was filthy including sinks, floors, toilets, walls, counters, you name it.”

Jackson says that, traditionally, her cleaning crew would hand-scrub to clean after new construction—a dirty, dangerous, and labor-intensive task to say the least. “I told the school administration we needed to find a machine that was not only a better way to clean, but could handle a variety of cleaning jobs like restrooms, stairs, floors, and lunchrooms. I told them all about the KaiVac No-Touch Cleaning™ system and they said I could buy one.”

The KaiVac no-touch cleaning system is designed to tackle medium to large—and super-tough—cleaning jobs such as new-construction cleanup, restrooms, stairs, floors, and lunchrooms.

“We started in the new pool area, then the locker rooms, in and around the bathroom fixtures, walls, and then the floors. All the dirt washed away. Using the KaiVac is 100 percent cleaner and faster than hand-scrubbing,” says Jackson.

Always Learning

“In a school, it’s not only the students getting an education; the maintenance crew has to keep learning too,” says Benoit. “We have to keep discovering new ways to be more efficient and productive.” The Kaivac system taught Benoit the importance of staying up-to-date with the newest cleaning technologies.

Jackson agrees. “I’ve been a custodian for 14 years. For most of that time, cleaning equipment really didn’t change very much. However, the Kaivac changed everything. It’s simply an easier, more sanitary, and much more professional way to clean.”
